## Brief Introduction:

- On Grid DC inverter solar air conditioner takes the most leading technology in the world market.
- When in sunny day, the solar panel can provide the power together with on grid electricity power to provide to air conditioner for start running, when it running stable, the air conditioner can running just with the power from solar panel, so it no need any electricity at this time.
- And when the air conditioner stop running at sunny day, the solar panel can produce the power to return to electricity grid, then it can let the power meter reverse, then save the electricity cost.
- And when in cloudy day or night time, the air conditioner can automatic to switch to electricity power.
